

BIO-RAIL FREESTALL

THE BEST OPTION FOR COWS

AVAILABLE FOR ALL AGES

Our **Bio-Rail Free Stall System** is a highly sought-after free stall mounting option. It's a twin-rail mount system that is versatile, stable, and easy to install. With its 3-point connection, it creates a triangle of strength that makes it highly resistant to torque.

The Bio Rail is ideal for facilities that prefer sand or manure bedding. It's corrosion-resistant and perfect for situations where little or no concrete is required in the bedding area. This system allows for greater flexibility in adjusting the stall's height and width. Plus, it can be installed by anyone without needing on-site welding.

We also offer a wide variety of loops for animals of all ages!
