

Sloped Feed Rails & V-Trainers

Training Tools for Future Headlock Use

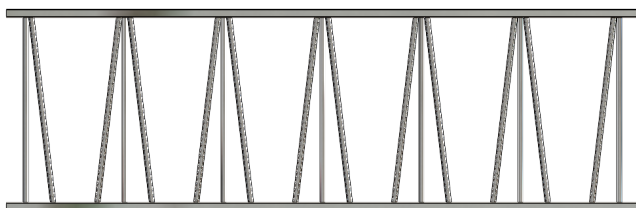

EASY INSTALLATION AND ADJUSTABLE

East Rock Sloped Feed Rails & V-Trainers have a unique bend for maximum head and neck space. This system typically used in Heifer Barns, not only keep heifers on the correct side of the feed, they also reduce bullying at the feed face. By using Sloped Feed Rails or V-Trainers as a training tool before transitioning to headlocks, you ensure a smooth transition and fewer refusals.

◆ SLOPED FEED RAILS: 8-12FT / 7- 14OPENINGS

◆ V TRAINERS: 5-15FT / 4 - 12OPENINGS

FEATURES & BENEFITS

- Unique bend for maximum head and neck space.
- Keep heifers on the correct side of the feed front.
- Adjustable rails on the feed rail allow the width & number of openings to be altered to provide greater flexibility.
